Benefits of a Dedicated Rehabilitation Hospital

At the Summa Rehab Hospital our focus is purely rehabilitation. Our passion and vision is to always provide state-of-the-art resources, technology, programs and services that help each of our patients maximize their recovery potential and function. With our vision and goals in mind, we have built and designed a hospital that meets the needs of our patients to the smallest detail.

Attending physicians are trained and board-certified in physical medicine and rehabilitation, and we have a large network of specialty physicians with attending privileges including pulmonary, oncology, cardiology and neurology. Each physician has the experience and expertise in treating patients with disabilities. Due to the acute nature of our patients, our physicians make frequent rounds on every patient. Our team of nurses also have years of experience in treating patients with various physical disabilities and have been trained in rehabilitation nursing.

A tour of our hospital will illustrate that we are focused in every single area and detail of pursuing maximum recovery and rehabilitation for our patients. Our hospital has been created with an evidenced-based design in mind where nature, natural light and the overall layout of the building are designed to assist with patient healing. Our designers, in conjunction with our care team, selected materials which reflect nature. Stone, wood elements and warm colors were utilized throughout the building. Natural light has been proven to improve healing and quality of life. The spacious rehabilitation gym, patient rooms, day rooms and corridors are enhanced with large windows with controlled sunshade.

The functional layout is a key element of the design of the hospital. Each design piece has a role in enhancing patient success by optimizing patient flow, creating a centralized caregiver model, providing a central hub with elevator, dayroom and staff support areas.

We develop individualized treatment plans through comprehensive therapeutic intervention and education. Our goal is to maximize each patient’s abilities so that each patient can return to his/her highest level of functioning and independence.

Family participation in the rehabilitation process is essential. We treat the disability as a challenge that requires the patient, family and staff to become partners in skill development.

By joining forces of the patient, family and our interdisciplinary team, our comprehensive rehabilitation can maximize abilities and foster the healthiest return to the community.

How to Make a Referral to Summa Rehab Hospital

You can refer patients by phone or send information by fax. Please have the following information available:
- The patient’s name, address, date of birth and social security number
- The name of the patient’s referring family or family physician
- The history of the patient’s present illness
- The patient’s insurance and/or Medicare information

Most medical insurance carriers, including Medicare, cover inpatient rehabilitation care. Check insurance policies to understand the details.
